

APPENDIX C

Period-Eccentricity distributions along the LVK Collaboration O3 contour

Statistics is the grammar of science.

— *Karl Pearson* —

In Figure C.1 we display the period-eccentricity distributions along the LVK Collaboration O3 contour. We also display a white dashed line corresponding to a merger time contour of the Hubble time. Most plots have a white region in the lower right corner of the plot, which corresponds to no systems passing through those bins. We use the definition of a Milky-Way Equivalent Galaxy (MWEG) from [Kasen et al. \(2017\)](#), namely that there is one MWEG per $(4.4 \text{ Mpc})^3$.

Figure C.1: The period-eccentricity distributions of populations governed by Bray kicks across the LIGO O3 contour. The combination of α and β used in the kick prescription is given in white along the left side of each plot. White regions denote no systems passing through those bins.
